EDUCATION

Diploma in Computer Engineering

MET Bhujbal Knowledge City , Adgaon Nashik

2023-2026

Secondary School Class 10th

K K Wagh Universal School , Nashik (CBSE Board)

2022-2023

TECHNICAL SKILLS

Python | React (Basic) |
TypeScript (Basic) | HTML |
CSS | MySQL | NumPy |
Pandas | Matplotlib | C

Ashaz Pathan

SUMMARY

An ambitious Diploma student in Computer Engineering driven by curiosity, innovation, and continuous learning. Recognized for combining logical problem solving with creativity to build practical web applications and software solutions using Python and modern web technologies. Passionate about developing real world projects that transform ideas into efficient and impactful digital products.

PROJECTS

- **Lumina Spaces – AI Interior Redesign System** : An intelligent spatial redesign platform that transforms static room images into structurally accurate, build ready 3D concepts while preserving architectural geometry.
 - Engineered a "Structural Lock System" using Three.js and WebGL, ensuring 1:1 architectural scale preservation of doors and windows during radical layout generations.
 - Integrated a Multimodal Vision Engine to perform furniture asset detection and lighting simulations, providing dynamic zoning logic and actionable spatial diagnostics.
- **Tools: React 19 | TypeScript | Three.js | WebGL | Multimodal AI | Tailwind CSS | Lucide React**

Jan 26 - Present

- **MovieQ– AI Powered Mood Based Recommendation Engine**
A movie discovery platform leveraging multimodal search and AI algorithms to provide personalized film suggestions across a database of millions of titles.
 - Engineered a "Mood-Based Search" engine using the OpenAI GPT-4 API, allowing users to discover films through natural language queries and complex emotional descriptors.
 - Architected a high performance metadata filtering system with React 18 and TMDB API, achieving sub second search latency across multi language datasets.
- **Tools: React 18 | TypeScript | OpenAI API | TMDB | Tailwind CSS|**

Dec 2025

- **Attendify – Smart Attendance Management System** :- A real time, role based educational platform that automates attendance tracking through client side facial recognition and reactive data syncing.
 - Engineered a biometric check in system using face-api.js and React, enabling secure, automated attendance marking with real time identity verification.
 - Architected a reactive backend with Convex to manage live subject dashboards, automated leave requests, and instant email notifications for 3 distinct user roles.
- **Tools: React 18 | TypeScript | Convex (BaaS) | face api.js | Tailwind CSS | Vite | Lucide React**

Aug 2025

INTERNSHIP

NPIT Solutions
Full Stack Application Development (AI & ML) Intern

June 2025- Aug 2025

- Completed an intensive 3 month industrial training focused on building and deploying machine learning models into full stack applications.

ACHIEVEMENTS

- **Mahavir Polytechnic, Nashik – MAHA-VEER 2026 (National Level Technical Event) – Winner (1st Place):** Achieved first place among national-level participants with the project Lumina Spaces, earning a trophy and recognition for innovation, execution, and real-world problem-solving capabilities.
- **JIT Project Competition – Participation:** Presented an innovative technical project demonstrating practical application of programming and problem solving skills in a competitive academic environment.
- **IIT Bombay Cozmo Clench – Participation:** Competed in a national level technical competition, gaining exposure to advanced technology concepts and collaborative problem solving.
- **MET Bhujbal HackFusion – Semi Finalist:** Advanced to the semi finals while competing against degree level teams, showcasing strong development skills, creativity, and the ability to build impactful project solutions under competitive conditions.
